🌐 Madhurq | 🌐 MADHUR MUNDRA | 📁 Portfolio

Skills

Languages: C/C++, Java, JavaScript, SQL, Python

Technologies & Tech Tools: AWS, Java Swing, Spring/SpringBoot, NodeJS/ExpressJS, ReactJS, Linux, TailWindCSS

Core: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOPs), Database Management Systems (DBMS), Software Engineering, Operating System, Pytorch, Machine Learning.

Education

Dharmsinh Desai University at Nadiad, Gujarat

Aug 2023 – July 2027

B.Tech in Information Technology

CGPA: 8.65/10

Relevant Coursework: Object Oriented Programming, DBMS, Discrete Maths, Data Structures and Algorithms

Operating Systems, Computer Networks, Data Analysis, Advanced Algorithms, Compiler Design.

Delhi Public School, Vadodara, Gujarat

2013 – 2023

Higher Secondary School

Final Grade: 85%

Project Work

CloudCanvas-Architect – AWS Architecture Design Platform

🌐 CloudCanvas-Architect | [LINK](#)

Technologies: React, Node.js, Express, PostgreSQL, Firebase Auth, Supabase, XyFlow, AWS CloudFormation

- Built a full-stack AWS architecture design platform with React, Node.js, and PostgreSQL, featuring a drag-and-drop canvas, real-time cost estimation, and one-click CloudFormation deployment.
- Integrated the AWS Price List API to enable real-time cost estimation for 40+ AWS services, supporting configurable pricing models across 25+ regions and instance types.
- Implemented a decentralized Marketplace feature allowing 50+ concurrent users to seamlessly buy, sell, and share custom system designs.
- Engineered an AI-driven design assistant utilizing the Gemini API to automatically generate complete, deployable AWS architectures from natural language prompts, reducing manual design time by 85%.

CodeDuelZ – A 1v1 Competitive Coding Platform

🌐 CodeDuelZ | [LINK](#)

Technologies: React.js, Spring Boot, PostgreSQL/Supabase, STOMP, Monaco Editor

- Developed a real-time 1v1 competitive coding platform using Spring Boot and React, featuring WebSocket (STOMP) matchmaking that pairs users in under 2 seconds with sub-50 ms latency for live match synchronization.
- Highly responsive RESTful APIs designed for user profiles, leaderboards, and code submissions using Spring Boot and JPA/Hibernate, achieving average response times of < 100 ms and efficiently handling concurrent requests.
- Engineered an automated problem-ingestion service to parse and index a 2000+ LeetCode problem JSON dataset in under 5 seconds; utilized regular expressions to dynamically extract test cases, enabling O(1) database retrieval and accelerating real-time code evaluation by 60%.

Java-Shell – An Implementation of Shell in Java

🌐 Java-Shell

Technologies: Java, JShell, Java Swing

- Developed a fully-functional shell interpreter from scratch in Java supporting 15+ built-in commands (ls, cd, cat, mkdir, rm, touch, etc.) with output redirection, argument parsing, and external command execution via ProcessBuilder.
- Designed a Swing-based GUI interface with real-time tab completion, command history navigation, context menus, and persistent user customization (colors, themes) stored via a singleton configuration manager.
- Engineered a 'start' command to open any .exe or .out file, utilizing ProcessBuilder and an optimized file search using HashMap.

Awards and Certificates

- AIR-3 in National Creativity and Aptitude Test
- Qualified Gate 2026 with AIR - 7662
- Won DuHacks 5.0 (offline)
- Top 5 at TicTechToe hackathon in DAIICT
- AWS Cloud Foundations Certification
- Organized Digital TreasureHunt event for Felicific 2025
